Application/Control Number: 08/645,073

Art Unit: 3662

- 1. The finality of the Office Action of 01 September 1999 has been WITHDRAWN.
- 2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by McMullan, Jr. et al ('086) or McMullan, Jr. et al ('690).

It is noted that McMullan, Jr. et al ('086) is a divisional application of McMullan, Jr. et al ('690), so they are treated together in this rejection.

For the purposes of this rejection, claims 1-3 are used as exemplary.

Considering independent claim 1, each of the applied references shows a CATV system with impulse pay-per-view, where the distributed programs are scrambled. The "content medium" is read on at least all of the headend structure that stores the program and program-related data relating to showing times, which would include the order processing circuitry in each of the references. When a program is ordered, the order locks in an authorization of viewing a scrambled, transmitted program for a particular time interval. The claim 1 "period reader ..." reads on the structure at the headend that reads the stored data regarding the delivery time of the pay-per-view showing. Typically, these showings are scheduled well in advance and are printed in a program guide for customers. As for the claim 1 "present time data generator ...", inherently each of the applied references would have a time generator as part of the computer controlling the

Application/Control Number: 08/645,073

Art Unit: 3662

transmission of ordered pay-per-view showings, so that the showing starts at the scheduled starting time and is cut off at the scheduled ending time. As for the claim 1 "comparator ...", this is inherent in each of the applied references in that the computer at the headend must decide when the starting time for a pay-per-view program has arrived and when the ending time has arrived, when the showing is cut off. The claim 1 "server ..." is clearly just the part of the headend dealing with program delivery. In McMullan, Jr. et al ('086), please note the mention of IPPV (impulse pay-per-view) at column 10, lines 3-35. In McMullan, Jr. et al ('690), please note the mention of IPPV at column 8, line 44 through column 9, line 34.

With respect to dependent claim 2, the further limitations of this dependent claim are fully met by each of the applied references in that each pay-per-view program and its showing schedule are inherently stored at the headend.

With respect to the further limitations of dependent claim 3, these are full-met by the inherent transmission of the decryption key to the CATV terminal at the customer's location. Specifically, claim 3 reads on the sending of the signal to read out the decryption key for transmission to the customer. Please note item 313 in Figure 3 of each of the applied references. This is the scrambler, so there must be a descrambler at the CATV terminal at the customer's location. Such a CATV terminal for scrambled pay-per-view always has a key downloaded for descrambling of the ordered pay-per-view program.

Art Unit: 3662

The remarks with respect to claims 4-19 are substantially those given with respect to claims 1-3 hereinabove. 4.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bernarr Gregory whose telephone number is (703) 306-5765. The Art Unit FAX number is (703) 306-4195.
